## Learning Journey: Temples, Tombs and Treasures.

**Digestive System:** The food we eat has to be broken down into other substances that our bodies can use. This is called digestion. Digestion happens in the digestive system, which is lots of organs in our body that break down food so that it can go into our bloodstream. The digestive system requires the mouth, teeth, oesophagus, stomach, small intestine, and large intestine which we have in our bodies.

1. Small intestine 2. Large intestine

**Ancient Egyptians:** The Egyptians were around 5000 years ago and lasted for 3000 years. They started to build villages next to the River Nile which is the longest river in the world. The Egyptians invented one of the first ways of writing which was called Hieroglyphics which Egyptians believed was invented by their Gods. Egypt is above the equator, located in the North East of Africa.

## KEY TERMINOLOGY

**Mouth:** Opening on the face where you take in food.

**Tongue:** A muscle in the mouth used for tasting.

**Teeth:** Hard, white object in the mouth used for chewing.

**Oesophagus:** Tube that takes chewed food from your mouth to your stomach.

**Stomach:** Stores and breaks down food you eat.

**Small Intestine:** Food gets broken down and absorbed into your body. This is bigger than the large intestine!

**Large Intestine:** Takes the waste from your food ready to be removed from your body.

**Hieroglyphics:** Egyptian way of writing.

**Burials:** Putting a dead body into a tomb.

**Tomb:** Large room, sometimes underground to bury the dead.

**Equator:** An imaginary line that divides the middle of the Earth.

**Hemisphere:** The way the Earth is split by the Equator, into North and South hemispheres.
